Video-Based Microlectures Using Screen Capture
By Tom Naclerio, Information Technology

Blended hardware and software solutions offer infinite ways to create high-quality learning materials. With Echo360 lecture capture, faculty are able to record and publish video content directly to their courses in Blackboard using the simple Echo360 lecture capture interface.

Professors have the option to record classroom lectures using technology right in select classrooms all over campus, or record to their personal computers on campus, or on the go!

Classroom Lecture Capture: Schedule single event or reoccurring recordings based on your individual class goals.

Personal Capture: Record on your personal PC on campus at home or on the go. Publish to Blackboard when you’re ready! You are in complete control.

**ACTIVE LEARNING PLATFORM (Coming Summer 2015)**

The Echo360 experience is getting even better! With a fully updated look and enhanced engagement features, traditional lecture capture is now only the tip of the iceberg. Faculty and students can now engage in discussions before, during and after class under one simple interface.
